

# HOW CARE OF THE BLADE

Is highly recommended to take care of the blades. Their condition may affects your performance.

The most important thing a skater must do is make sure that the blades are wiped down and completely dry after using it. If they do not do this it can lead to rusting.

When the blade is completely dry, use skate guards! Make sure your blade guards are in good condition, and replace them when necessary.

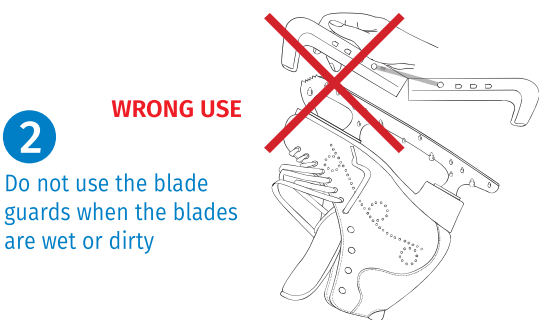

**CORRECT USE**  
with blade guards

**1**

Do not walk around the rink on their blades without guards. It is very easy to chip or scratch the blades if they step on something

**2**

Do not use the blade guards when the blades are wet or dirty

**3**

The skater should not be required to use anything to clean the blade. As long as the blade is completely dry their shouldn't be any issues.

**Risport skateguard**

**Risport skatebag**

When it's time to store blades in your skate bag, put them in the fabric skate guards, this will help you to prevent rust formation and protect the blade while inside your bag.
